WINDOWS 10 / 11

ILLUSTRATOR 2026

X64 BETA

MyVibe 0.2.0 beta | 2.5D Transform 0.9.5 beta | August 2026

SECTION 01

Start here

MyVibe installs both parts required by 2.5D Transform: the native AIP engine and the CEP interface. The plug-in adds live X, Y, Z, and perspective controls for editable Illustrator artwork while MyVibe manages installation, updates, removal, backups, and recovery.

CURRENT COMPATIBILITY

Windows 10 or 11 on x64 devices; Adobe Illustrator 2026, version 30.x; Microsoft Visual C++ 2015-2022 Redistributable, x64.

Contents	What you will learn
02 Install with MyVibe	Download, verify, install, and open the plug-in
03 Transform artwork	Presets, orbit controls, exact values, and selection modes
04 Reuse and synchronize	Copy, paste, link, unlink, and linked-group management
05 Finish and maintain	Reset, expand, update, version history, and removal
06 Troubleshoot	Recover from common installation and artwork problems
07 Quick reference	A compact action guide and support checklist

BETA SECURITY NOTICE

The current MyVibe executable and native AIP are not yet signed with a publicly trusted Windows certificate. Continue only when the download came from the official GitHub Releases page and its SHA-256 checksum matches the published value.

Supported artwork

- Paths, compound paths, Pathfinder results, groups, and clipping groups
- Live text and symbols
- Gradients, raster images, and placed images
- Individual-center and shared-center multi-object transformations

SECTION 02

Install with MyVibe

Before you begin

- Save your documents and close every Illustrator window.
- Use a Windows account that can approve an administrator prompt.
- Download only from github.com/badrulmokhtar/myvibe/releases.
- Do not manually mix AIP and CEP files from different versions.

Download and verify

1 Download the Windows x64 ZIP

Open the official GitHub Releases page and download the latest MyVibe Windows x64 archive.

2 Extract the archive

Move the ZIP to a normal folder and extract it. Do not run MyVibe from inside the ZIP.

3 Compare the checksum

Find MyVibe.exe and SHA256SUMS.txt. Calculate the SHA-256 value in PowerShell and confirm that both values match exactly.

```
Get-FileHash -Algorithm SHA256 -LiteralPath .\MyVibe.exe
```

4 Start MyVibe

Run MyVibe.exe. Windows may show Unknown publisher during the beta. Stop if the checksum did not match.

Install the plug-in

1 Select 2.5D Transform

The card shows the available or installed version. The detail panel shows Illustrator, Windows, architecture, and component status.

2 Select Install plugin

MyVibe checks Illustrator 2026 and the required Visual C++ runtime before changing any files.

3 Approve administrator access

Elevation is requested only for installation, update, or removal. MyVibe creates a backup before it changes Illustrator.

4 Wait for confirmation

Keep Illustrator closed. Start it only after MyVibe confirms that both plug-in components were installed.

MyVibe shows plug-in state, compatibility, required components, and the primary install or remove action.

WHY TWO COMPONENTS?

The CEP interface supplies the panels. The native AIP engine performs the Illustrator effect. If one is missing, the panel can report Native engine unavailable. Reinstall with MyVibe to keep both components on the same release.

Open the panels

Window > Extensions > 2.5D Transform

Window > Extensions > 2.5D Transform: Linked Groups

Dock either panel beside your other Illustrator panels. The controls reflow when you resize the panel.

SECTION 03

Transform artwork

The main panel applies a shared transformation to linked artwork while keeping controls available for live editing.

1

Select supported artwork

Use Illustrator's Selection tool and select one top-level object or group. The status at the top of the panel confirms the selection.

2

Choose a preset or orbit the cube

Select a built-in view, drag the cube to orbit, or hold Shift while dragging to roll.

3

Fine-tune exact values

Adjust Rotate X, Rotate Y, Rotate Z, and Perspective. Changes update live and values remain absolute rather than stacking.

Control	What it changes
Rotate X	Tilts artwork forward or backward
Rotate Y	Turns artwork left or right
Rotate Z	Rolls artwork clockwise or counterclockwise
Perspective / Depth	Controls perspective strength from 0 to 100
Orbit cube	Adjusts X and Y together; Shift-drag adjusts roll

ABSOLUTE VALUES

Moving a parameter to 50 and then back to 0 returns that parameter to 0. The plug-in does not add another stacked transformation each time you edit a value.

SECTION 03A

Modes and presets

Transform multiple objects

Mode	Use it when	Center behavior
Individual	Repeated items should keep their own position and orientation	Each object uses its own center
Together	The full selection should behave like one composition	The selection uses one shared center

A mode is disabled when the current selection cannot use it. For complex selections, the panel may preview only the selected or source artwork during a drag, then update every follower precisely when you release the control.

Use a view preset

- Open View preset and search by name.
- Select a preset to apply it to the current selection.
- Built-in examples include Front, Isometric Left and Right, Two-point Left and Right, Top plane, and Cabinet Left and Right.

Save a custom preset

1

Create the view

Set the rotation, perspective, and selection mode you want to reuse.

2

Select the save icon

Enter a clear preset name, then select Save.

3

Maintain the library

Rename, duplicate, or delete custom presets. Built-in presets can be duplicated but cannot be renamed or deleted.

LARGE SELECTIONS

Updating 24 items is normal progress, not a frozen panel. Keep dragging and release the control. The final precise value is then applied to the complete linked group.

SECTION 04

Reuse and synchronize transformations

Copy and paste a view

Use this workflow when artwork should receive the same current values but remain independent.

1

Copy the source view

Select the object whose transformation you want, then select Copy view.

2

Paste to another selection

Select different artwork and select Paste view. Later edits do not affect the source.

Link a selection

Use linking when every member should continue sharing exact X, Y, Z, perspective, and transform-mode values.

1

Select two or more objects or groups

You can link individual paths, live text, groups, or a supported combination.

2

Select Link selection

If the selection contains different transforms, choose the existing linked group or selected object whose view should be used.

3

Edit any member

The complete linked group follows the new values. Each member keeps its own location and center according to Individual or Together mode.

Unlink without changing appearance

Select one or more linked members and select Unlink. The artwork keeps its current appearance but stops following future group edits.

Action	Relationship after the action	Later edits
Copy view / Paste view	No relationship	Objects remain independent
Link selection	Persistent shared group	Editing any member updates all members
Unlink	Selected member leaves the group	Appearance stays; future edits are independent

SECTION 04A

Manage linked groups

Open Manage linked groups from the main panel, or open the Linked Groups extension from Illustrator's Window menu. The companion panel keeps large relationship lists away from the main controls.

Use the companion panel

- Search linked groups or member names.
- Switch between All groups and Current selection.
- Select every member of a linked group on the artboard.
- Rename a linked group.
- Select an individual member in Illustrator.
- Unlink one member while preserving its appearance.
- Unlink an entire relationship after confirmation.
- Choose which existing transformation a new or merged selection should follow.

VISUAL STATES

Blue highlighting means the artwork is currently selected on the Illustrator artboard. A colored group dot identifies membership and does not mean the item is selected.

When linked groups are merged

Choose the transform source before confirming the link. Every member in the resulting group receives that selected transform. If the operation cannot be verified, both panels show Change not applied and the previous appearance is restored.

Grouped Illustrator artwork

Select the top-level group when you want the group to transform as one object. Linked grouped artwork is selected, revealed, and updated through its top-level Illustrator identity rather than by changing only its children.

SECTION 05

Finish and maintain

Reset

Select Reset to restore the cached original view and default transformation values. When artwork belongs to a linked group, the operation can affect every member sharing the transform. A failed verification triggers rollback and a Change not applied notice.

Expand to editable vectors

Select Expand to editable vectors when you want to commit the visible result as regular Illustrator vector artwork. Expansion is a finishing step. The result no longer behaves like the same live 2.5D effect, and live content can become vector output. Duplicate important artwork or save the document first.

SAFE FINISHING

Keep an unexpanded copy when you may need to revise the view later. Expand only the approved final artwork.

Update 2.5D Transform

- Save your documents and close Illustrator.
- Open MyVibe and select Check for updates.
- Select Update to [version] when a plug-in update is offered.
- Approve administrator access, then restart Illustrator after completion.

MyVibe verifies the download and saves the current plug-in before replacement. If the update fails, it attempts to restore the previous copy.

Update or restore MyVibe

When a future manager update is offered, the update action verifies the release, stores the current manager version, replaces MyVibe, and restarts it. Open Version history to see restorable manager versions. A restorable entry appears only after the first successful manager update.

SECTION 05A

Remove and recover

Remove 2.5D Transform

- Save your documents and close Illustrator.
- Open MyVibe and select 2.5D Transform.
- Select Remove plugin and confirm the action.
- Approve administrator access, then restart Illustrator to refresh the Extensions menu.

MyVibe backs up the current native engine and CEP interface before removal. The backup remains local to your device.

Backups: %LOCALAPPDATA%\MyVibe\backups\2.5D Transform

AUTOMATIC RECOVERY

Installation, update, and removal operations save the current plug-in state first. If a later step fails, MyVibe attempts to restore that saved state and reports whether recovery succeeded.

If recovery also fails

- Keep Illustrator closed.
- Copy the complete error message.
- Record the Windows, Illustrator, MyVibe, and plug-in versions.
- Open a GitHub issue without attaching private artwork or credentials.

SECTION 06

Troubleshooting

MyVibe says Illustrator is open

Save your work, close every Illustrator window, wait a few seconds, and retry.

Illustrator 2026 is not detected

Install Illustrator 2026 version 30.x. This beta does not install into older Illustrator releases.

Visual C++ runtime is missing

Install Microsoft Visual C++ 2015-2022 Redistributable for x64, restart MyVibe, and confirm that it shows Detected.

Windows shows Unknown publisher

Verify the official release source and SHA-256 checksum. Do not continue when the checksum differs.

The extension is missing

Close Illustrator completely, reopen it, and check Window > Extensions. If it remains missing, reinstall with MyVibe.

Native engine unavailable

The CEP interface is present but the AIP engine is missing, incompatible, or not loaded. Close Illustrator and reinstall with MyVibe.

Controls stay disabled

Select the top-level object with the Selection tool. Unlock locked artwork and show hidden artwork. Meshes and live graphs are unsupported in this beta.

A linked object changes unexpectedly

Open Linked Groups and check membership. Unlink the object if it should keep its current appearance but stop following the group.

Large selections feel delayed

This is lightweight preview mode. Release the control so the exact final value can be applied to every linked member.

An operation fails

Read the complete message and keep Illustrator closed. MyVibe or the plug-in normally restores the prior state. Retry only after confirming the recovery message.

REPORT A REPRODUCIBLE PROBLEM

Include the exact error, Windows version, Illustrator version, MyVibe version, plug-in version, and reproduction steps. Do not upload private artwork, credentials, environment files, signing certificates, or AI chat exports.
